

Provide a **Service** to:

- **support** the development and use of software and data
- to enable **high quality research**
- in the **audio and music** research community

How?

- **Employ software developers**, to make existing research software robust & usable
- **Training for researchers**, to write robust & reliable research code
- **Help for academics / research project managers**, to build software development into research projects
- **Curation of data and software**, to help future researchers find what they need

Today's Workshop:

`code.soundsoftware.ac.uk`

- creating an account
- creating a project
- using EasyMercurial to manage code in the repository

All feedback is highly appreciated!
